ENTERPRISE FITNESS NOTES PAGE

Please take the time to read and understand all of the information below. This will be applicable to all of your training programs. Any questions please ask your coach.

ENTERPRISE®
F I T N E S S
DAY 1	LOWER BODY (1)				Date;	Date;	Date;	Date;
Order	Exercise	Sets	Reps	Tempo	Rest	Week 1	Week 2	Week 3	Week 4
M1	Lying Glute Clams	2	20ea	control	0				
A1	DB Split Squats; front foot elevated	5	8 to 10ea	4010	60	5kg (10 reps)	7.5kg (10 reps)	10kg (9 reps)	12.5kg (8 reps)
A2	Lying Leg Curls; planta flexed	5	8 to 10	4010	60				

COLOUR KEY

** This refers to the 'activation' exercises you **MUST** perform before starting your session e.g M1 - Lying Glute Clams. **Note;** Walking to the gym **DOES NOT** mean you are warmed up to train

** This refers to the exercise that you will perform e.g **A1-A2** This particular setup is what we call a **PAIRING**. Perform A1 (rest) Perform A2 (rest) Go back to A1

** This refers to the amount of **SETS** you will perform of an exercise. Be aware this isn't necessarily the same for everything.

** This is the amount of **REPS** you will perform for each set of the exercise. This will often be given as a range e.g **8 to 10**

** This refers to the **SPEED** at which the exercise will be performed at **(please see below for further explanation)**

** This refers to the total amount of **REST** you will take between each exercise **(the time written is a MINIMUM unless advised oterhwise**

** This is where you record your **WEIGHTS**. It is important that you do this so your coach can see the progress you are making and when you are due a new program also

	HAND / FOOT POSITIONS
Neutral Grip (hand)	Palms facing towards one another
Pronated Grip (hand)	Palms facing towards the ground
Supinated Grip (hand)	Palms facing towards the roof
Unilateral Grip (hand)	Two separate handles (not joined together)
Dorsi Flexed (foot)	Toes pulled up towards you
Planta Flexed (foot)	Toes pointed away from you

	TEMPO EXPLAINED - 4010
4	The 1st number is the **ECCENTRIC**. This is the lowering phase (lengthening of the muscle) e.g DB Split Squat = **4 second LOWER** from the top to the bottom
0	The 2nd number is the isometric pause in the **STRETCHED** position. This immediately follows the eccentric e.g DB Split Squat = 4s down **0 second PAUSE**
1	The 3rd Number is the **CONCENTRIC**. This is the lifting phase (shortening of the muscle) e.g DB Split Squat = 4s down 0s pause **1 second LIFT**
0	The 4th number is the isometric pause in the **SHORTENED** position. This is a squeeze of the active muscle. e.g DB Split Squat = 4s down 0s pause 1s lift **0 second PAUSE**

	RATE OF PERCEIVED EXERTION
RPE - 6	Fairly easy, like a warm up
RPE - 7	You can perform 4-6 more reps
RPE - 8	You can perform 2-3 more reps
RPE - 9	You have 1 more rep left in the tank
RPE -10	You went to failure with perfect form
RPE - 11	You went to failure with partial reps, after completing perfect reps

1

								RPE - 12	You used a high intesnity technique to push beyond failure
WHAT?	This is the gradual progression of **WEIGHT** over the duration of a program. Your aim is to continue challenging your body to adapt							RPE - 13	You used multiple high intensity techniques to go all out
HOW?	You want to use the RPE scale (>) to determine the true demand of the weight you are using. Let's use an 8 to 10 rep range as an example. Week 1 could be an RPE 7 for the 10 reps. By week 4 you want to be **CLOSE** to RPE10 for 8 reps. Still working within the rep range given								

The top-left cell of the table contains the bold header **PROGRESSIVE OVERLOAD EXPLAINED**.
